

# COUNTRIES SPEND MORE ON EDUCATION THAN OFTEN ASSUMED

National Education Accounts (NEAs) help countries produce better data on education spending by including public and private sources.

**Before the NEA, Nepal seemed to be spending less on education than Côte d'Ivoire and Viet Nam. When the NEA added more funding sources, Nepal took the lead.**

We need to know more about the massive contribution of families to their children's education. If the burden on family finances is too high, problems can arise with education access and equity.

Households provide one-half of education funding in Uganda and Nepal, one-quarter in Viet Nam and one-third in Côte d'Ivoire.

# MINISTRIES OF EDUCATION ARE NOT ALWAYS THE MAIN GOVERNMENT FUNDERS

Government funding by ministry and agency
