Introduction

On 26 September 2018, the UNESCO Institute for Statistics (UIS) released new education data for the reference year 2017 on the UIS website as well as the UIS online database and various digital products.

The UIS is the official source of data used to monitor progress towards Sustainable Development Goal on education (SDG 4) and the Education 2030 Agenda. The UIS leading role in the monitoring of the SDG 4-Education 2030 Agenda is articulated around five main lines of action: support to Member States, development and implementation of standards, development of indicators, data collection, dissemination and analysis.

UIS data can be accessed and downloaded free of charge online from two platforms: UIS.Stat database at http://data.uis.unesco.org/ or via the UIS API Portal at: https://apiportal.uis.unesco.org/. UIS.Stat is an online database that enables users to build their own data tables and graphs while the API portal provides programmatic access to the UIS statistical data and metadata to allow developers and researchers to build websites and applications that make rich use of the UIS dissemination data. It also provides third parties with fast, uniform and robust access to our data.

The UIS website, which offers a range of publications, visualisation tools and other digital products, can be accessed at: http://uis.unesco.org.

As of September 2018, the UIS has moved to one main education data release in September of each year. This release includes national data and regional averages for the school or reference year ending in the previous year and includes data collected from administrative and household surveys, including educational attainment and literacy statistics. Following this release, national data are updated in February of the following year, completing the UIS publication of education data for the round of surveys conducted in the previous reference year.

Please see the annex for a short description of UIS data collection and validation processes.

UIS education data are commonly used to identify the strengths and weaknesses of school systems, especially in developing countries struggling to meet the rising demand for education. Every year, UIS data are featured in high-level publications and databases, such as the UIS global education database and the SDG 4 Data Digest (UIS), the World Development Indicators (World Bank), Education at a Glance (OECD), the State of the World's Children (UNICEF), the Global Education Monitoring Report as well as the SDG progress report and the Global SDG Database (United Nations Statistical Division).
Coverage of the education data release

Around 5,000 variables, including 32 SDG 4 indicators (most of which have time series data ranging from 1970 to 2017) were published for more than 200 countries and territories. This includes both country-level data as well as aggregates for relevant regional and income groupings.

The current data release includes new data for:

- 95 countries with 2017 or more recent data on enrolment, teachers and related indicators for pre-primary, primary, secondary and post-secondary non-tertiary education;
- 58 countries with 2017 data on tertiary education;
- 57 countries with 2017 data on education finance and expenditure;
- 38 countries with more recent data on literacy;
- 80 countries with more recent data on educational attainment.

There are different factors that explain why data are missing for a country or an indicator. Most commonly, the UIS did not receive all of the data necessary to calculate the indicator for the country in a particular year. In some cases, indicators were not published because the UIS or the country identified inconsistencies in the reported data. When this happens, the UIS engages with the country to try to resolve the issue. This explains why there are usually more countries reporting data to the UIS that those for which data are published.

The data covered in the September 2018 data release cover a wide range of topics including: entry, participation and progression in school from early childhood education to tertiary education; learning outcomes; equity; literacy; educational attainment; international student mobility; human and financial resources invested in education; school resources and facilities; information and communication technologies in education; national regulations on free and compulsory education; and the structure of national education systems.

Table 1 in the annex presents the main indicators and variables by topic and the related disaggregation.

SDG 4 indicators included in the release

There are 43 SDG 4 indicators (11 global indicators and 32 thematic indicators) to monitor SDG 4-Education 2030 Agenda. The UIS is the custodian agency responsible for the development and production of data for almost all of the SDG 4 indicators (41 out of 43). This responsibility is shared with partner organizations.

The Technical Cooperation Group on the Indicators for SDG 4 – Education 2030 (TCG) serves as a platform to discuss and develop the indicators used for monitoring the Education 2030 targets. The TCG is composed of 38 regionally-representative members from UNESCO Member States, international partners,
civil society and the Co-Chair of Education 2030 Steering Committee, with the UIS hosting its Secretariat. Each year the TCG meets and approves a certain number of indicators for monitoring in the current year. The UIS release includes the latest available data for 32 out of the 33 SDG 4 global and thematic indicators adopted by the TCG for monitoring in 2018.

Table 2 in the annex presents the SDG 4 indicators published in this release and Table 3 presents the remaining SDG 4 indicators for which no data are available.

New SDG 4 or SDG 4-related indicators added in this release:

1. **SDG 4.3.2**: Gross enrolment ratio for tertiary education, by sex – added household survey indicator Gross Attendance Rate (GAR), disaggregated by sex, location and wealth;
2. **SDG 4.3.3** Participation rate in technical and vocational programmes (15 to 24-year-olds) – indicator was expanded to cover ISCED levels 4 and 5;
3. **SDG 4.4.1** Proportion of youth and adults with information and communications technology (ICT) skills, by type of skill added data by sex;
4. **SDG 4.5.1** Parity indices (female/male, rural/urban, bottom/top wealth quintile and others such as disability status, indigenous peoples and conflict-affected, as data become available) for all education indicators on this list that can be disaggregated – split into categories based on the parity indices and added additional indices for the new/updated indicators;
5. **SDG 4.6.1** Proportion of population in a given age group achieving at least a fixed level of proficiency in functional (a) literacy and (b) numeracy skills, by sex added data by sex, socio-economic status and immigration status;
6. **SDG 4.6.3** Participation rate of illiterate youth/adults in literacy programmes – indicator added;
7. **SDG 4.7.2** Percentage of schools that provide life skills-based HIV and sexuality education – indicator added;
8. **SDG 4.a.2** Percentage of students experiencing bullying in the last 12 months – indicator added;
9. **SDG 4.a.3** Number of attacks on students, personnel and institutions – indicator added;
10. Start of the academic school year (pre-primary to post-secondary non tertiary education) – indicator added;
11. End of the academic school year (pre-primary to post-secondary non tertiary education) – indicator added;
12. Start of the academic school year (tertiary education)-indicator added;
13. End of the academic school year (tertiary education) – indicator added.
Annex

Data collection and validation processes

To produce the data, the UIS collects data through harmonized education surveys sent to Member States on an annual basis. The UIS administers the following education surveys to Member States:

- Survey of Formal Education: which collects data on the number of students, teachers and educational expenditure for all levels of education. For countries under the responsibility of the Organisation for Economic Development and Eurostat, this survey is jointly administered between UIS and the two organizations.
- Questionnaire on Educational Attainment Statistics;
- Questionnaire on Literacy Statistics.

In 2018, the UIS also administered version 2.0 of its Catalogue of Learning Assessment (CLA 2.0) to collect national data for some specific SDG 4 indicators on learning outcomes, ICT skills, literacy and numeracy skills.

To avoid duplication of efforts and minimize the reporting burden on Member States, the UIS collects also education data directly from partner’s organizations or extracts the information directly from recognized online databases (e.g MICS and DHS surveys). To calculate education indicators, the UIS collects also demographic data from the United Nations Population Division and economic data from the World Bank and the International Monetary Fund.

UIS data are based on the following data sources: administrative data (government administrative records, schools censuses), household surveys, population censuses and leaning assessment surveys. The UIS has put in place a rigorous system to validate data with Member States. First, data are carefully reviewed to ensure that they are complete and comply with international standards and definitions, such as the International Standard Classification of Education. Second, the UIS sends a detailed data report to the respondents who submitted the country data, documenting the issues found during data processing and requesting clarification and/or updated figures. Finally, the UIS sends a file with calculated education indicators to national authorities for their review and approval (see diagram below for the UIS data quality assurance process).

**SDG 4 indicators for which UIS is not publishing data in this release**

The following table presents the SDG 4 indicators for which data are not currently available. These indicators require further methodological development and the UIS is actively working in coordination with the TCG on this.

The methodology and data collection have already been completed for the global indicator SDG 4.7.1 on education for global citizenship and for sustainable development. UNESCO is currently undertaking a consultation to complete its validation with Member States. This indicator is expected to be published by the UIS in February 2019.
